Make your own fluffy bear

A step-by-step guide with photographs from the tutorial video.

Before you begin

In your kit: one precut length of fluffy wire, eyes, a nose, and accessories.
You will also need: a ruler or measuring tape, plus suitable craft glue.

Work slowly and compare matching parts before tightening each twist. The photos retain the original Chinese subtitles; the English instructions and captions explain each step.

Reading the directions: left and right refer to your view while looking at the bear's face. Video times below each photo help you find the matching demonstration.

Keep wire tips tucked away. Adult help is recommended for children using glue and small pieces. Glue is assumed for the finishing step; follow any attachment instructions supplied with your kit.

1 Fold the wire unevenly

Fold the precut wire back on itself. Adjust the ends so one is **10 cm (about 4 inches) longer** than the other. Do not cut the wire. Keep track of the longer end.

Measure the difference between the ends.

VIDEO 00:32

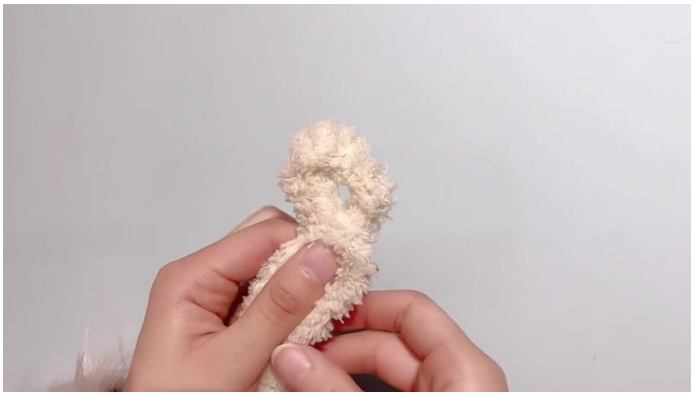

One end stays longer than the other.

VIDEO 00:57

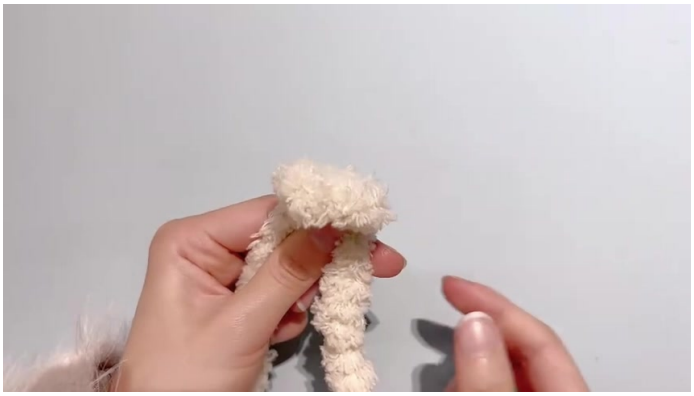

2 Shape the muzzle

Open the folded end into a small loop using two fingers. Pinch beneath it and twist to secure it; the demonstration adds two turns from left to right. Shape the loop into a small oval, then bend it forward about 90 degrees.

Pinch below the small muzzle loop.

VIDEO 01:27

Bend the muzzle forward to a right angle.

VIDEO 02:07

3 Make the first ear

Feed the longer end through the muzzle loop. Pull it through gradually, leaving an upright loop for the first ear. Keep the ear opening a little wider than one finger. Do not pull it completely closed.

Thread the longer end through the loop.

VIDEO 02:37

Leave a small upright loop for the ear.

VIDEO 03:07

4 Make the second ear

Repeat with the other end on the opposite side of the muzzle. Pull gently to adjust the size, then compare both ears. Make the openings equal before securing them.

Pull the other end through to form a loop.

VIDEO 03:37

Adjust until the ears match.

VIDEO 03:57

5 Secure both ears

With the face toward you, twist the ear on **your left** one turn toward the right. Twist the ear on **your right** one turn toward the left. Gently round the ears again after twisting.

Twist the first ear at its base.

VIDEO 04:22

Repeat in the opposite direction.

VIDEO 04:37

6 Wrap around the ears

Take the longer remaining end. Starting behind the head, wrap it up and around the ear on your left, then down behind the head. Continue up at the front around the ear on your right, then down the back between the ears. Keep the muzzle loop open.

Wrap around the first ear from behind.

VIDEO 05:07

Continue around the other ear.

VIDEO 05:57

7 Fill out the head

Keep one wire length in front and one behind. Bring the back length toward your left, feed it upward through the head opening from underneath, then bend it over the top and down the back. Shape the head gently, leaving the muzzle projecting forward.

Feed the wire upward through the opening.

VIDEO 07:22

Bring it over the crown and down the back.

VIDEO 07:37

8 Secure the neck

Move the back length toward your right. Hold the two lengths apart beneath the head, with a finger between them. Support the neck and rotate the head one full turn toward the right, as shown in the video.

Separate the two lengths below the head.

VIDEO 08:17

Hold the neck while turning the head.

VIDEO 08:42

9 Form the arms

Fold a short section of the wire on your right back on itself. Twist the doubled section to form the first arm. Bring the remaining wire across and repeat on the other side. Check that both arms are equal before tightening.

Fold and twist the first short arm.

VIDEO 09:12

Match the second arm to the first.

VIDEO 10:02

10 Form the legs

Use the remaining wire below the body. Fold a section upward and twist the doubled wire to form a leg. Repeat on the other side. Compare the legs and adjust them to the same length and thickness.

Fold a section upward and secure it.

VIDEO 10:27

Repeat to make a matching leg.

VIDEO 10:47

11 Wrap and shape the body

Wrap the leftover wire around the middle of the body, following the demonstration. Tuck the end into the wrapping so no sharp tip is exposed. Gently reshape the bear and fluff the fibers with your fingers to soften the joins.

Wrap the remaining wire around the body.

VIDEO 10:57

Adjust the ears, arms, legs, and body.

VIDEO 11:17

12 Add a face and accessories

Arrange the eyes and nose before attaching them. Use a small amount of craft glue suitable for the pieces, following the glue label. Add your chosen accessories and let everything dry fully before handling. **This finishing step is additional guidance; it is not demonstrated in the video.**

The undecorated bear, ready for its face.

VIDEO 11:22

Make it yours
Try the eyes and nose in a few positions before gluing. Small changes in spacing can give your bear a different expression.

Let the glue dry for the full time recommended on its label.
